

POOJITHA RAMKUMAR

Chennai, Tamil Nadu | Poojitharamk11@gmail.com | linkedin.com/in/poojitha-ramkumar | github.com/pooji-tha11

PROFESSIONAL SUMMARY

Motivated Computer Science Engineering student with a strong interest in cybersecurity, web development, and secure software systems. Experienced in building full-stack applications using React and FastAPI, with hands-on knowledge of JWT authentication, RESTful API design, and network security concepts. Actively developing a modular security assessment toolkit and seeking opportunities to apply technical skills in real-world cybersecurity and software development roles.

EXPERIENCE

Software Development Intern | Lambda Digital

May 2026 – June 2026

- Gained exposure to real-world software development workflows, project architecture, and API integration in a professional environment.
- Learned React and FastAPI fundamentals, building understanding of frontend-backend communication and full-stack application structure.
- Contributed to the initial development of an in-progress full-stack project using React and FastAPI.

EDUCATION

Bachelor of Engineering – Computer Science and Engineering

2025 – 2029

Chennai Institute of Technology – Anna University Affiliated

TECHNICAL SKILLS

Languages: C++, C, Python

Web & Backend: HTML5, CSS, FastAPI, React, JavaScript

Databases: MySQL, SQLite, DBMS Fundamentals

Tools & Platforms: Git, GitHub, VS Code

Core Competencies: Object-Oriented Programming (OOP), Data Structures and Algorithms (DSA)

Areas of Interest: Cybersecurity, Secure Application Development, Full-Stack Development

PROJECTS

FastAPI Blog Backend

May 2026

Technologies: FastAPI, SQLAlchemy, SQLite, JWT Authentication, Password Hashing

- Developed a RESTful blog API using FastAPI, implementing full CRUD operations for creating, retrieving, updating, and deleting blog posts.
- Integrated SQLAlchemy ORM with SQLite to structure database schemas, manage relational tables, and implement persistent data storage for user-generated content.
- Implemented secure user authentication using JWT tokens and password hashing, establishing foundational knowledge of API security and authentication workflows.

Cybersecurity Assessment Toolkit

June 2026 – Present

Technologies: Python, Flask, SQLite, Bootstrap, HTML5/CSS3, Network Scanning | Status: In Progress

- Architecting a modular, web-based security assessment toolkit using Flask to consolidate multi-functional utilities into a centralized dashboard interface.
- Developing functional modules for real-time password strength analysis, cryptographic hash generation, URL safety verification, and network port scanning.
- Maintaining clean code structure and modular file organization while using Git and GitHub for version control throughout active development.
